

Study Guide

this is a place to start, it is not ALL inclusive

learn the big picture first; then dive into the details; seek understanding not memorization

L17: Reproduction (male & female)

1. **Potential short answer: Describe** the negative feedback loop for reproductive hormones using the following 6 terms: **parameter** (in this case hormone level), **stimulus, sensor, integrator, effector, response**. *(it is the same general NFL for both male & female. There is one slide that describes it all; the hypothalamic-pituitary-gonadal axis slide)*
2. Very briefly describe the difference between **meiosis** and **mitosis** and where these occur in the human body. What is **gametogenesis** and where does it occur?
3. Name and describe the functions of **gonads** and the **secondary sex organs**.
4. Outline sperm production and delivery (*out of the body*) including: essential structures, processes & regulatory hormones
5. Describe in detail the **menstrual cycle** (*both ovarian cycle + uterine cycle*) including: structures, hormones, how pituitary gland stimulates ovaries & ovaries regulate uterus.
6. Briefly describe **ovulation, menstruation, fertilization, implantation, gestation, lactation**; know regulatory hormones for each process.
7. Differentiate mammary development, milk production, milk letdown reflex.
8. List and contrast the functions of **testosterone, estrogen & progesterone**.
9. **Potential essay: Name and describe** the events of the menstrual cycle, both ovarian and uterine, provide a time frame for these events, describe their function, and name the relevant regulatory hormones.
